Gaming Machine, Server, and Program

ABSTRACT

A slot machine is provided with specification value setting means for

5   setting at least one specification value as a control condition when game

control is carried out, total result data receiving means for receiving from a

server the data of the total result of a game result achieved by a first gaming

machine and a game result achieved by a second gaming machine,

specification value determining means for determining the specification value

10   on the basis of the data of the total result received by the total result data

receiving means, and specification value renewing means for renewing the

specification value set by the specification value setting means to the

specification value determined by the specification value determining means.

There is provided a slot machine for renewing the specification value on the

15   basis of the total result of the game results achieved by the first and the

second gaming machines.
